

Locale

address	country	city	state
Primary Key			

1..\*  
The address of a Google Database Center belongs to one or more Employees. There is one and only one work address of an Employee. The address is the primary key because it is a detailed representation of the location of where an Employee works

Employee

Foreign Key							
localeAddress	firstName	lastName	id	department	position	workSchedule	salary
	Candidate Key		Primary Key				

The Candidate Keys are the first and last names because people can have the same names but unique id numbers. The uniqueness of the id number makes it a better choice to be a primary key

1..\*  
The Primary Key is the id number because it is a unique number associated with one Employee. An Employee uses a Server with their unique identification number that belongs only to that employee. However, one or more Employees can use the same server using their unique ID.

Server

				Foreign Key			
type	purpose	macAddress	ipAddress	employeeID	maintenanceTime	networkType	location
